

The most important day in the life of your central air conditioner is the day it is installed. Proper installation and sizing can account for almost 75% of the operating efficiency and performance of your home's central air conditioner. The reason is simple: air conditioning is a system, not a self-contained appliance like a refrigerator. Optimal cooling performance and efficiency are directly related to the proper sizing, air distribution, refrigerant charge, and installation.

Getting the Right Central Air Conditioner for Your Home

When you invest money into a new central air conditioning system, you need to know you are getting the right equipment for your particular needs and that you get a cooling system that will perform to your expectations. That's why one of our specialists will take the time to understand your family's unique needs to recommend the cooling system that best meets your requirements.

Factory Authorized Dealer Of Armstrong Air and Luxaire Air Conditioners

As an Armstrong Air (Div of Lennox International), and Luxaire (York) Factory Authorized Dealer, you can count on years of efficient, reliable performance from your new central air conditioner. These high-efficiency systems are designed to save you money and have a reduced environmental impact while keeping you comfortable through hot summer days.

Experienced Air Conditioning Professionals

On the day of your central air conditioner installation, our technician will take personal responsibility for your complete satisfaction. We'll arrive on time on a day that's convenient for you. No installation is complete without your thorough introduction to your new central air conditioning system. We take the time to explain everything you need to know in order to operate and enjoy your new cooling system.

With over 25 years of experience, we can handle everything from simple repairs to extensive installations and ductwork.
